One common use of TPN is in the treatment of severely malnourished or injured patients. In such cases, TPN may be administered as a life-sustaining treatment until the patient has a chance to receive normal nourishment from the digestive system. In the meantime, various medical liquids are continuously infused into the patient to provide essential nutrients. Many different types of infusion apparatus are known for administering TPN. The following patents illustrate several of the known prior art TPN infusion devices: U.S. Pat. Nos. 4,371,002, 4,406,656, 4,438,923, 4,435,184, 4,934,372, 4,991,587, 5,002,551, 5,065,743, 5,116,333, 5,116,337, 5,176,693, 5,320,639, 5,445,639 and 5,447,524. Known TPN infusion devices generally consist of a syringe-like device which is suspended in an intravenous (IV) tubing line or tubing conduit. The IV tubing line is connected to an access port located on a patient and in fluid communication with the patient's circulatory system. The IV tubing line is connected to a TPN reservoir which contains a prescribed amount 82157476af
